DETAILED ACTION

1. All divisional applications cited by the attorney have been reviewed.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sako (0347934 B1).

With respect to Claim 1, Sako meets the limitation of “encoding a bit of decryption data into a pattern of merge bits; and encoding channel bits having the pattern of merge bits of step (a); and transmitting the channel bits resulting from step (b)” on page 3, lines 53-58, page 4, lines 1-55 and on page 5, lines 1-55. The merge bit pattern is disclosed on page 4, lines 29-31. The voice signals represent the decryption data. The voice signals are encoded as described in the reference. The data signals represent the channel bits.

It would have been obvious to one of ordinary skill in the art at the time of the invention to have the data signals represent the channel bits because the data signals are composed of data content and are encoded according to a pattern of merge bits.

With respect to Claim 2, Sako meets the limitation of “decoding the channel bits from step (c) and decoding the pattern of merge bits in the channel bit of step (d) back into the bit of

Art Unit: 2135

step (a)” on page 6, lines 29-35; and “using the decoded bit of step (e) to modify the decoded channel bits of step (d)” on page 6, lines 37-40.

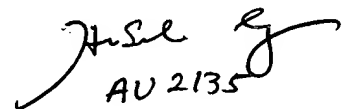

It would have been obvious to one of ordinary skill in the art at the time of the invention to have the data signals represent the channel bits because the data signals are composed of data content and are encoded according to a pattern of merge bits.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tracey Akpati whose telephone number is 571-272-3846. The examiner can normally be reached on 8.30am-6.00pm.
